

## Adding custom e-mail address and CC to anonymous form Submit button

**Step 1.** Create a template with all required fields. In **PDF Share Forms Designer**, open **Home** tab, click **Settings**. Navigate to Deployment destination and enable **Anonymous Submit**. In order to use e-mail submission, select **Submit by e-mail**.

Deployment destination	
Site	Current site 
Document Library	SampleDocLib 
Anonymous submit	<input checked="" type="checkbox"/> Allow anonymous submit
	<input checked="" type="radio"/> <u>Submit by e-mail</u>
	<input type="radio"/> Direct submit
	<input type="checkbox"/> Handle form by PDF Expert instead of Adobe Reader on iOS devices

**Step 2.** Add a button to your template.

Go to **Properties** → **Actions**, select and drag „Submit to SharePoint” action to control’s active area.

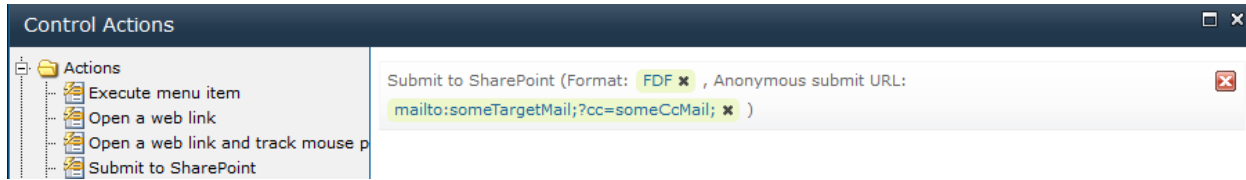

Once the required action is placed, add submit format and url:

**Format:** FDF

**Anonymous submit URL :** mailto:someTargetMail;?cc=someCcMail;

\* „mailto” serves as an indicator for e-mail receivers; „someTargetMail” is e-mail address of receiver; „someCcMail” is e-mail address of CC.

**Step 3.** Save the action by clicking **OK** and deploy the template.

Once submission button is pressed, the system will generate an e-mail with „someTargetMail” address in „To” section, „someCcMail” address in „CC” section and submitted form as a file attachment.
